

School of Agriculture CLARESHOLM

(Under the Provincial Department of Agriculture)

Term Opens November 9th, 1927**BOYS**

Course in Agriculture—Animal Husbandry, Field Husbandry, Carpentry and Blacksmithing, Farm Machinery, Dairying, Poultry, English, Mathematics, etc.

Course in Home Economics—Lectures and Practical Work in Cooking, Sewing, Home Nursing and other household subjects, Dairying, Poultry, English, Mathematics, etc.

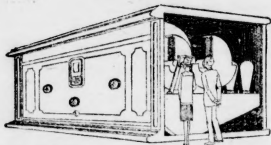

GIRLS

No Tuition Fees. Every boy or girl 16 years of age or over may attend.

School Calendar mailed on request. Residence for Girls.

S. H. GANDIER, Principal.

DE FOREST CROSLEY RADIO

If You Could See Inside Your Radio

If you could look through every part of a DC Radio with X-Ray eyes, you would be amazed to observe how precision, strength and fine adjustment enter into even the smallest detail of construction.

Like the smooth and dependable action of a good watch, DC accuracy assures you lasting satisfaction.

Clareholm Local News

Gene Mullholland is a patient in the local hospital this week.

Mrs. Stewart Ellis is a patient in the local hospital since the 27th.

Born, at the local hospital, on October 29th, to Mr. and Mrs. Louis Norgard, a daughter.

Mrs. Fay Olmstead was operated on for appendicitis on Wednesday, at the local hospital.

Born, at the local hospital, on October 30, to Mr. and Mrs. Norman Good of Stavelly, a son.

The Anglican church will hold their bazaar this year in the I. O. O. F. hall, on Saturday, December 3rd.

Clareholm schools reopened on Monday after being closed two weeks under infantile paralysis regulations.

Owen Smith, son of Mr. H. R. Smith, was operated on for appendicitis last Saturday, at the local hospital.

The Dempsey-Tunney fight pictures will be shown at the Rex theater on Monday and Tuesday, November 21 and 22.

The Golf Club is putting on a dance in the I. O. O. F. hall on Thanksgiving night. The Blackbird orchestra will play.

Mrs. L. C. McKinney of Clareholm was elected provincial president of the W.C.T.U. at the convention held in Edmonton last week.

Dolores Costello in "The Heart of Maryland" at the Rex theater Friday and Saturday this week. Based upon the play by David Belasco.

Ruth Dalman of Stavelly was brought to the hospital here on Sunday last, suffering from injuries resulting from being kicked by a horse.

The Catholic Women's League, Clareholm Subdivision, are holding an Armistice tea and sale of home cooking on Saturday, November 12th.

Mrs. D. A. Anderson entertained at bridge on Wednesday afternoon in honor of her sister, Mrs. Alexander of Winnipeg, who is visiting here.

Mrs. Summerfield and Mrs. Harrison, kindly ask of every woman of the St. John's Church of England to donate a handkerchief of any kind or size for their booth in the annual bazaar.

Hallowe'en passed off with comparative quiet here. Some of the youngsters spent the evening in innocent amusement, while others sneaked windows, overturned a few outbuildings, and misplaced a few vehicles.

THE PEOPLE'S FORUM

Editor Review-Advertiser.

The folks who were in quarantine last week, having told the Mayor their requirements for water and having been refused, phoned their physician about it; the doctor in turn phoned the Deputy Mayor, who promised to send the water, but did not. On request Mr. Solo left his business and brought the water himself (thanks to him). Seeing that the Mayor and Council are so anxious to spend \$13,000 or \$14,000 to build a skating rink, it is too much to ask them to spend 50 cents to have a half barrel of water delivered to those in real need.

A Citizen.

Editor Review-Advertiser.

The Mayor makes 200 citizens of the town go without water for the sake of \$3.20 overtime and is re-elected against one man. The Mayor being superintendent of the water department, we hope he had a nice bath, a good drink of water, and a sound sleep, on the evening of night of October 27th while some of the small children had to go to bed thirsty. Of an exhibition at the School of course, being superintendent, the Mayor must stop work at 4:30 o'clock and rest regardless of the discomfort of some 200 citizens.

A Citizen.

The first bridge drive given by the Catholic Women's League will be on November 25th, in the I. O. O. F. hall.

Snow druries on Sunday night and Monday night held up threatening to some extent. Favorable weather followed till Friday morning when a wet snow commenced falling. About three inches of snow fell. This will put a damper on threshing for several days. There is a lot of threshing yet to do in this district.

Mrs. D. A. Munro and Mrs. H. A. Fairbairn were hostesses at a Halloween masquerade ball, in the I. O. O. F. hall on Monday night. There were 75 guests in costume, and many lovely costumes were in evidence. The prize for best ladies' costume was won by Miss Pocattillo of the School of Agriculture staff, and W. G. Moffatt was awarded the prize for best dressed gentleman. Miss Wilma Palmer played the piano for the dancing.

FREDERICKSON-STARK

A very pretty wedding was solemnized at 12 o'clock on Thursday, November 3rd, at the home of Mr. and Mrs. John Walls, when their niece, Miss Ruby Baille Stark, daughter of Mr. W. B. Stark, was united in marriage with their son, Mr. W. B. Stark, son of Mr. and Mrs. M. Frederickson, in the presence of about thirty guests. Rev. R. W. Dalglis officiating.

Miss Rita Cockburn was bridesmaid, and Raymond Frederickson was groomsmen.

The ceremony was followed by a fine wedding luncheon. The young couple left on the afternoon train for Calgary and Banff to spend their honeymoon, many friends being at the station to see them off and showers of confetti and rice, and extending best wishes for a happy married life.

Death of Former Clareholm Resident

Mr. Wm. Miller, a sometime resident of Clareholm, died at the home of his daughter Mrs. E. Woodard, in Chapleau, Ont., on the 2nd inst.

Mr. Miller leaves a wife, four daughters—Mrs. E. Woodard and Mrs. Geo. Young of Chapleau, Mrs. Jos. Maxwell and Mrs. Thos. Hickey, both of Creston, B. C., and one son, W. C. Miller of Clareholm, to mourn his loss.

He also leaves 29 grand-children—amongst whom are Mrs. A. Heatherington of Clareholm and Jarvis Miller of Carmanagay—and 9 great-grand-children.

He was 86 years of age.

Competition Cup Donated to Students in Agriculture

The School of Agriculture, Clareholm, have much pleasure in announcing the donation by the National Elevator Co. Ltd., of a cup for competition amongst the students of the regular course in Agriculture, the following rules to govern the competition:

1. The student of the Second Year who has obtained the greatest aggregate marks in practical and written examinations in the subject of Field Husbandry, including all tests the term in grain and seed judging, during his first and second year courses combined, shall be declared the winner of the cup.

2. Winner must have taken his first and second year work during two successive school sessions.

3. Students taking the two year course in one term because of advanced educational standing are not eligible to compete.

4. The cup shall not become the permanent property of the winner. The name of the winner each year shall be engraved thereon and the cup shall remain in the School of Agriculture.

5. The National Elevator Co. will present to each winner, a gold button of special design and suitably engraved.

Mothers:---

Why have the worry and anxiety of baking bread, when you can get Pure, Wholesome Finest Quality, White, Wholewheat, and Raisin Bread at Clareholm Bakery, at 10 cents per loaf.

Property Losses Due To Fire Cost The People Of Canada The Sum of \$200 Per Minute

Forest fires have taken a terrible toll from the value of Canada's natural resources, but they are after all but one phase of the terrible scourge of fire. According to the Natural Resources Intelligence Service of the Department of the Interior at Ottawa, Canadians pay over one hundred million dollars per year in property losses due to fire, in the maintenance of fire-fighting organizations and in insurance premiums in excess of losses paid. This is a staggering sum. Capitalized, it represents a debt on the Canadian public of over two billion dollars the income from which is required to meet these charges, at the rate of \$200 per minute—a sum all equal to the national debt or to the country's entire railway investment. This takes no account of unemployment charges and must result of all, lives lost.

Anything that will arouse public interest in the threat of fire, that will stimulate public concern in organizing to combat this plague of carelessness—since 80 per cent of fires are caused by human negligence or neglect—should be given wholehearted support by every public-spirited citizen. A special edition of the Review-Advertiser, in the morning making the week of October 30 to 31st the official Fire Prevention Week in Canada provides a definite incentive for more efficient prevention and educational work. The Royal Proclamation has the following sentences to effect:

1. All dwellings and their surroundings be carefully inspected by their occupants and all conditions likely to cause or promote the spread of fires removed.

2. All public buildings, stores, warehouses and factories be inspected and cleaned of rubbish in order to reduce fire hazards and maintain health and safety.

3. At hotels, theatres, asylums, hospitals and other institutional buildings be inspected and provisions made for all changes necessary to protect the occupants from danger in the event of fire.

4. Fire drills be held for the children in all schools, for the inmates of all institutions and for the employees in all large stores and factories in order that a greater degree of safety may be secured by acquainting the occupants with the best and most expeditious mode of exit in time of danger.

5. Special instruction on the subject of fire prevention be given by the teachers and by municipal officials to the schools and that such appropriate literature as may be made available be distributed to the pupils.

6. Boy scout leaders give instructions to the troops under their control as to the best means of co-operation with municipal fire departments in the prevention and extinguishment of fires and especially as to the desirability of qualifying for the Fireman's badge.

7. All legislation and regulations entered into by local, provincial, or municipal authorities designed to give fire prevention be given publicity by the municipal officials and that by public notices the citizens be made aware of the importance of the national importance of safe-guarding life and property from loss by fire.

A Real Masterpiece
Recently there was a distinct earthquake shock which disturbed a small Western city and rocked the municipal building so that the construction, then in session, left without the usual ceremonies. The clerk, a man of miles and valiantness, was hard put to give his annual report per official time. Finally he evolved this masterpiece: "On motion of the city hall, the council adjourns."

Work Of Ancient Architect
The oldest house plan in the world, an ancient architect's drawing, discovered in Mesopotamia, has been placed on exhibition, about four thousand years old, it shows the ground plan of a large house of 17 rooms. Details are shown in accurate and clear drawings.

Preacher (at wedding): "Does anybody know why these two should not be wedded?"
Bride's Father: "Well, outside of the fact that he hasn't got a job and she can't cook, I guess it's all right."

Johnny: "How long after five takes the automobile 'til I know any thing?"
Doctor: "Now, my boy, don't expect too much from an automobile."

W. N. E. 1162

The Homing Instinct

Is Deeply Ingrained in Many Birds and Animals
Superior as human beings may consider themselves, they do not possess the wonderful homing instinct which is ingrained in many birds and animals, fish and insects.

Put a city man, for example, in the middle of the prairies without help—a compass, the sun, signposts, or other aids—he would be lost. We have no "homing sense," says a writer in *Trillium*.

Dogs have been sold, taken by train a hundred or more miles, and then, fostered and educated, have returned. So have horses and cats. Pigeons are taken in baskets long distances from their nests, and when released fly home.

In an effort to solve the mystery of this homing sense, experimenters have been made with bees. We talk of making a bee-line from one place to another, and thereby pay a compliment to bees for knowing where they want to go and getting there without deviation, but how they do it has probably not interested us. It seems established that they use their antennae—the "feelers" at their heads—to measure the angles and turns in their outward flight, and by some nervous system of memory-registration they take the "bee-line" back.

Another theory—and this would account for the mystery of dogs' extraordinary plumage—is that there are actual lines in the air, millions of them, each with a distinctive and recognizable quality, either electrical, odorous, or something at present unknown. The fact remains, however, that bees return on a direct line; that homing pigeons, of two or three short flights, circle to find a "line" and then take it; and that dogs, paddling through unknown country, will stand and apparently sniff for the "line."

The snuff may be for smell, or for contact with the mysterious "line" which, on its length, a hundred miles or more, takes its line. The absorbing interest of all this lies in the possibility of giving, or restoring, the "homing sense" to man. Some say he is dying, and if he dies, the danger and difficulties of aerial navigation would vanish. Bees, show us the way to get home!

If the lamb "liked" to follow May Day today it could most certainly have to step on the gas.

Friends are almost as nervous as umbrellas when they are needed.

Cannot Be Explained

Why Heavy Rain Falls After a Battle Is Mystery

Among the many ideas and hypotheses advanced during the war was one, not so unreasonable as many others, that the violent rain storms occurring after a battle were caused by the explosion of high powered explosives. Soldiers and scientists noticed the storms, noted that they followed the explosions, and many of them saw in this sequence a case of cause and effect.

But in the year 101 B.C., after the battle of Aix, where Cæsar's army drove more than 100,000 Teutons, the same phenomenon occurred. Indeed, rain fell so hard, the story goes, that the inhabitants became enriched because the earth was fertilized by the material of the purified bodies.

Having noted these facts, Plutarch proceeds to philosophize as follows: "It is an observation, also, that extraordinary rain falls generally after great battles, whether it be that some divine power thus washes and cleans the polluted earth with showers from above, or that moist and heavy exhalations, rising forth from the blood and corruption, thick on the air, which naturally is subject to alteration from the smallest causes."

The observation, therefore, was that when in Plutarch's time, and that was many hundred years before gunpowder was used in warfare, the explosion theory is simply a random explanation for an old generalization. It is a striking example of the human tendency to see cause and effect between phenomena that happen to succeed one another.

What is the connection between the meteorological disturbances of Cæsar's Mar's time and those of the World War? Nobody knows. Maybe our scientists, aided by the new discoveries of our prepressible aether, will find an explanation of all this in the old Roman general. Then again, rain after battle may simply be another mere coincidence. Life is so much else that is puzzling in life, that, trusting attention when it comes, it never when it fails to appear.

Celebrate Radium Wedding

Everybody has heard of read of gold, silver, and diamond weddings. A new expression has been coined by the French to designate the seventh anniversary of a marriage: "The radium wedding." It is a new and old, Monsieur and Madame Clorand, who were both born in 1826 in a small town in France, were just celebrated that important event.

While their long distance journey of the air have this summer happily oriented in the direction of the U.S. airlines there are other homes which are celebrating with its more or less faded reputation for speed in every respect. Instead, they have sailed to Great Britain.

A few months ago Major Scraggs, a son of British parents, drove a British car at a speed of 202 miles an hour. A British-built airplane won the Schneider cup with an average speed of 281 miles an hour. Both these records are a long way ahead of any thing else recorded by any other nation.

The globe is continuously being rolled by the Old Country in a bit "slow" in many ways. These wars, however, show that British engineers are fully awake, and that British still has brains and mechanical skill more than a match for the rest of the world.

Suddenly it may be observed that the British machine which won the Schneider cup travelled at a speed of 28.26 miles an hour for some parts of the distance. During its trial the machine was a machine, designed for landing on water, when necessary, the result of this race strongly supports the contention that only airplanes should be permitted to essay Atlantic flights.

At the average speed of the British machine, it could have crossed the Atlantic in something less than half the time Lindbergh took to fly from New York to Paris.

Possibilities Of Sheep Farming

Room In British Columbia For Many Thousands More

There is room for two million sheep in British Columbia, and at present there are around 100,000 only in the Province. Even that small total is double what the sheep total was two years ago. At Duncan, Vancouver Island, where the first sheep farm in the province was held recently, attention was drawn to the possibilities of sheep farming. T. MacKenzie, grazing commissioner, said large-odd lands could maintain many sheep and that there were 60,000 acres of such lands under over last year in British Columbia, half of which were adjacent to Vancouver Island. He said, however, that the "best" which has been held near this season and this halved the honey crop, is good food for sheep.

Estimated That 70 Per Cent. Of New Arrivals In Canada Are Engaging In Agriculture

Has Strange Hobby

Teledu Man Fashions Life Size Biblical Figures From Concrete

Labelling with travel and mortar for nearly a decade, Cæsius M. Heltinger, Toledo real estate dealer, has surrounded his home with life size figures portraying Bible life. He has built them of concrete and covers them with gleaming shells.

He is engaged now in building a scene of the Last Supper and estimates it will require several years to build the twelve disciples and the Master seated around the table.

A deeply religious man, Heltinger declares he received a vision twelve years ago which bade him undertake the work of creating Bible scenes. Hundreds of tourists annually visit him from the outskirts of Toledo.

He says he has refused many offers to sell the collection of figures.

He travelled for two years from coast to coast seeking a particular shade and size of shell, and finally located the kind he wanted on the beach at Littleport, several miles from his house.

The life size camel, being led to water by Zachariah, the tax collector, was originally constructed by him. It required six months work.

Daniel in the lion's den and Jacob's ladder, however, the artist has made, it, are other Biblical scenes he has represented.

Almost every inch of the walls of his home is covered with canvases he has painted in extended trips over the country. At present he says, he works at long three days and nights without stopping to sleep. Considered wealthy, Heltinger handles his business for months at a time while engaged in creating the Biblical scenes.

British Engineers Are Awake

More Than Match Other Nations In Mechanical Skill

While there are long distance homes of the air have this summer happily oriented in the direction of the U.S. airlines there are other homes which are celebrating with its more or less faded reputation for speed in every respect. Instead, they have sailed to Great Britain.

A few months ago Major Scraggs, a son of British parents, drove a British car at a speed of 202 miles an hour. A British-built airplane won the Schneider cup with an average speed of 281 miles an hour. Both these records are a long way ahead of any thing else recorded by any other nation.

In a study of immigration to Canada for the first six months of 1922, just issued by the Canadian Pacific Railway, the number of immigrants is given as 107,390, as compared with 70,552 in 1921, an increase of 51,357, or 72.8 per cent. for the 1922 period. British immigration increased from 27,819 to 34,474, or by 23 per cent; that from the United States from 10,077 to 12,551, or by nearly 15 per cent; and that from other countries from 32,567 to 41,343, or by nearly 90 per cent. Analysis of immigration to the Dominion for the first three months of the present fiscal year, from March to June, reveals the fact that among the greatest individual contributions to Canadian population in the period, followed by the Scotch, citizens of the United States, Rumanian, German, Irish, Polish, Magyar, Slavic, Norwegian, and Finnish. The States of the Union still furnish the largest number of immigrants, were Michigan, New York, Dominion, Minnesota, California, and Massachusetts.

At the present-day immigration to Canada," says the report of the survey, "is to be gathered from the statistics of the first three months of the present fiscal year, from March to June, reveals the fact that among the greatest individual contributions to Canadian population in the period, followed by the Scotch, citizens of the United States, Rumanian, German, Irish, Polish, Magyar, Slavic, Norwegian, and Finnish. Meets Mary Queen of Scots

A Vancouver man had just arrived at Banff, Alberta to attend the Banff Musical Festival "closed" as it is called, when the most remarkable figure he had ever seen came to him.

The man was standing on the street, looking at the hotel across the street, when he saw a woman in a long, flowing dress, with a crown on her head, and a sword at her side. She was looking at him with a smile, and he felt that he had met a queen.

The woman was Mary Queen of Scots, and she was standing on the street, looking at the hotel across the street, when he saw a woman in a long, flowing dress, with a crown on her head, and a sword at her side. She was looking at him with a smile, and he felt that he had met a queen.

ANSWERS TO LAST WEEK'S QUESTIONS

274. What Is the Associated Press?
An organization of about 1,200 newspapers, banded together for the free exchange of news in their respective territory, and distribution of the important news of the world. Has its own leased wires (\$5,000 miles) forming a vast network from coast to coast and from the Canadian to the Mexican borders. Has no capital stock, makes no profits, declares no dividends. Its revenues of \$27,000,000 annually are wholly derived from weekly assessments upon its member newspapers. Number of words received daily and transmitted at ones try to avoid it. Whales,

each important office is more than 5,000, the equivalent of 60 newspaper volumes.

275. How Does It Obtain Foreign News?
Has at its disposal the chief news agencies of the foreign countries, such as Hodge in Belgium, the Canadian Press in Canada, Reuters in China and England, Havas in France and Portugal, Kokusai in Japan, Continental Telegraphen Company in Germany and Estafeta, Stefani in Italy. There is not a corner of the globe not accessible in some way to the Associated Press. In each of the leading countries of the world a bureau is maintained, with highly intelligent American correspondents and staff men in charge, who receive and transmit the important news received from these affiliated agencies.

276. How Is the News Furnished the Member Papers?

There are four divisions, eastern in New York, central in Chicago, southern in Atlanta, western in San Francisco. Three trunk wires run New York to Chicago, and are connected with the A. P. bureaus of all the larger cities en route, as Baltimore, Washington, Pittsburgh, Cleveland, Detroit, Cincinnati, Chicago. Each of these bureaus relays to other state and trunk wires. World-important news flashes over the cable at New York, is at once sent over all trunk wires leading out of New York, copied by the operators of all A. P. bureaus en route, and in a few minutes relayed over all the leased wires of the A. P. to the country (NEWS) and delivered to the various member papers.

277. How the Sound of Breaking Waves Guides the Sea Creatures?
The most constant noise in nature is the washing of sea waves. The constant, high-pitched, hiss-making noise produced by waves breaking on the shore or by white caps on the ocean seems disagreeably repellent to many sea members. Number of words received daily and transmitted at ones try to avoid it. Whales,

CHURCHES

UNITED CHURCH

Rev. A. H. Rennie of High River, formerly of Calgary, will preach both morning and evening. (11 a.m. and 7:30 p.m.)—Special Thanksgiving services.

Let all Sunday school scholars rally for the reopening of the school at 12:15.

Rev. R. W. Dalgleish.

ST. JOHN'S CHURCH OF ENGLAND

There will be no service at this church on Sunday, November 6.

LUTHERAN CHURCH

Clareholm

Sunday, November 6

Clareholm—English service at 3 p.m. No morning service.

Granum—Norwegian service at 11 a.m.

Sunday school at 10 a.m.

Clerg Lake Ladies Aid on Thursday, November 10th, at the home of Mrs. Henry Billet.

All are cordially invited.

Robert Hermansen, Pastor.

THE CHURCH OF THE NAZAREN

(Next door west of the Clareholm Garage.)

Services as follows:

Sunday

10:30 a.m.—Sunday School.

11:30 a.m.—The Church Call. Aid to Beirther.

3 p.m.—People's Meeting. This will be a Thanksgiving service for the special purpose of rendering unto God some of the praise due His worthy name. This praise may take the form of singing, or prayer, or personal testimony, or even of silent thanksgiving to God for His blessings upon you this year. This will not be a preaching service, but distinctly a praise service.

7:30 p.m.—What Shall I Render Unto the Lord? A Thanksgiving evangelistic service.

Tuesday, 8 p.m.—Prayer service.

Friday, 8 p.m.—Bible study.

We cordially invite you to meet with us in worship in these services.

Rev. A. H. Eggleston, Pastor.

THE WALL OF CHINA

In 214 B.C., the Chinese commenced building the Great Wall, which isolated their country from the rest of the world and helped retard their national progress.

The business man who maintains a wall of "dig-nified reserve" towards the buying public is just as surely retarding his own business growth.

Your advertisement in The Review-Advertiser would be a standing invitation to your store. When our readers open up their paper do they see your "bid"?

porpoises and dolphins, also many fishes, always run well off shore, being apparently guided by these sounds; while on windy nights, some of the surface remain safely beneath it. Storms increase the sounds, thus warning the various creatures to keep farther from shore or to submerge to greater depths.

278. The Automobile Density of the United States?

The entire U. S. has 1 motor vehicle for each 67 inhabitants; 11 of the states have 1 for each 5 inhabitants or less. Leading states rank in order named: California, a motor vehicle for each 34 inhabitants; Iowa, with 1; Nevada, 42; Kansas, Nebraska and Oregon each with 43. Of the 11 states having a ratio of less than 5, all except Indiana with 47 and Michigan with 48 are west of the Mississippi. Vermont, with a density of 57, leads New England and the Atlantic seaboard. Among the southern states Florida leads with 53, while Alabama, with a ratio of 48, is at the bottom of the list.

279. What Two Countries of the Western Hemisphere Lead in Surfaced Highways?

A recent survey of the various

important countries of the Western hemisphere establishes their relative highway mileage. The 16 most important countries of South and Central America, whose total area exceeds the combined areas of the United States and Canada and more than doubles that of either of them, have approximately 126,671 miles of surfaced highways and 111,000 miles of dirt roads, while Canada has 54,611 miles of surfaced highways and 323,629 miles of dirt roads; and the United States 521,260 miles of surfaced highways and 2,484,822 miles of dirt roads.

280. Longest Automobile Road in the World?

The African Great North Road (4800 miles), Cape Town to Cairo, is now open to auto traffic. The section Cairo, Tora to Bulawayo, Southern Rhodesia, is a fine modern highway; as is the northern section Cairo to Mongolia, in the Anglo-Egyptian Sudan thence to Nairobi in Kenya Colony, about 180 miles east of Lake Victoria. On the section Bulawayo to Nairobi 2500 miles travelers are advised to carry both rifles and dogtags for protection against wild animals; also a bag of lard, pemmican, in event of accident and assistance of natives be required.

ARE YOU GETTING VALUE?

To some homes a newspaper is a newspaper, and no thought is given to the quality. That rule does not apply when buying homes, especially. The best is then wanted, even if it costs more. Why should those homes not be as particular about the reading material that comes into the family, particularly when the very best can be had at the same price as the inferior article? It is a wonderful combination of newspaper and family magazine and a farm journal without an equal on the Continent, and it costs no more than an ordinary country weekly—one dollar a year. Seventy-two pages every week of the choicest reading for every member of the family at cost of less than two cents a week. Should interest every home in Canada. No wonder The Family Herald and Weekly Star is read by a million Canadians each week. It is well worth a trial.

Two factors, No. 1.—A total of 314 pages pertained in the Principessa, Brazil disaster off the coast of Brazil.

B. C. Adopts

Pensions Scheme

First Province to Participate in Old

Age Pensions Plan
Old age pensions will become operative in British Columbia immediately under an order-in-council approved by the deputy governor-general. Announcement to this effect has been made by Hon. Peter Haines, Minister of Labor.

The order-in-council gives full sanction to the carrying out of an agreement entered into by Mr. Haines and A. M. Macdonald, Minister of Labor for British Columbia, by which the province comes under the old age pensions legislation passed at the last session of parliament.

British Columbia is the first province to participate in the Federal plan. A similar agreement, Mr. Haines stated, would however, be entered into with the Yukon, probably on the arrival of Gold Commissioner Fred Reid, next fall.

Mr. Reid has been authorized by the Yukon to sign the agreement, Manitoba, and Saskatchewan have also made recent enquiries, respecting the procedure to be adopted by their respective legislatures in order to join in the Dominion scheme of old age pensions.

The agreement provides that on and after September 1, British Columbia will pay a minimum pension to those of its residents who have attained the age of 70 years and are not maintainable under the old age pensions act.

The Dominion Government, on the other hand, is bound to pay to British Columbia quarterly, one-half of the amount paid by the province in pensions during each three months period.

Enquiries received by the Department of Labor indicate that, in certain instances, the old age pensions scheme is not properly understood. It is brief that the act provides that the province may elect to come under the plan which the Dominion and provincial governments have agreed upon, or may continue to pay out of its own funds.

The maximum amount paid to any recipient of old age pensions is \$20 per year. Applications for pensions may be made by a British subject or a widow who is not a British subject but was before her marriage upon attaining the age of 70 years. Each applicant must have resided in Canada for 20 years immediately preceding the date of the application and lived in the province for five years.

No subject who is an Indian with the meaning of the Indian Act is eligible. If a pensioner has a yearly income over \$125, the maximum amount of \$20 payable annually is reduced in his case by the amount received by him in the way of income in excess of \$125.

Largest All-Metal Planes

Great Britain Leads World in This

Type of Machine

Great Britain now leads the world in airplane aeroplanes, for it has been disclosed that her latest all-metal airplane, weighing 12,000 lbs., is now equipped with Rolls-Royce engines, has just completed a cruise of 5,500 miles over the North and Baltic Seas.

In addition there are now in use even more formidable aeroplanes intended for war purposes which are at present undergoing trials. Four of these will leave Plymouth very soon, in order to undertake a 25,000 mile tour, visiting Egypt, India and Australia.

It is also announced that two passenger flying boats, intended for use on overseas sections of the Empire air route between those three countries, a distance of some ten thousand miles, are nearing completion. They will be capable of carrying fifteen passengers.

The use of stainless steel in the manufacture of the new air battle-

ships enables an enormous saving in weight, while it also protects the craft from rust by sea water.

An Irish Prisoner

In that time which is now sometimes referred to as "the good old days," Pat and Mike had been fighting entirely too much. Father Reenan met them on the street and made them promise to go to his house the next day and take the pledge.

Early the next morning Pat met Mike; they shook hands and started for the priest's abode. Their way took them past a saloon.

"Hi, Mike," says Pat, "What say we stop in at the saloon just before we take the pledge?"

"Now," replied Mike, "His rhyms might snarl our breath. Wait till we've come back."

"A fellow just took me I looked like you."

"Where is he? I'd like to knock his block off."

"I killed him."

W. N. U. 1702

Has Had Colorful History

Famous Steamer Again To Serve As Oil Burner

Another page is to be written in the colorful history of the steamship Yapura, first vessel to navigate the waters of Lake Titicaca, in the Andes mountains, the highest steam navigated lake in the world. Growth of the oil industry, reports to the commerce department say, has led to the abandonment of the ship.

Many years ago, before the Southern Railway of Peru was extended to Lake Titicaca, the Yapura was brought out from England, to Puno, Peru, and there completely dismantled, mounted on flat cars and shipped to the railroad of the Southern. From that point the vessel's ports were carried by mule and llama to Lago, on the lake, and reassembled, and she was placed into service at an altitude of 12,245 feet above the sea level.

Natives became greatly excited as the vessel, of about 1,000 tons, commenced her lofty maiden voyage, belching forth clouds of black smoke as she churned the waters near their basket boats.

After many years of service, during which two steamers and a motor boat joined her on the lake in the clouds, the Yapura was retired. Natives, however, recently have found it desirable to have the old Yapura is now being reconditioned and fitted out as a tanker with a capacity of 1,200 barrels. She will carry crude petroleum from Lago to Quacu, across the lake, for Bolivian consumption.

Always On Starboard Side

Cabin Of Honor Occupies Place

Of Honor On Any Ship

It was not pure accident that placed the Prince of Wales' suite into the new liner Empress of Australia, when he came to Canada, on the starboard, or right-hand, side of the ship. The Prince occupied this position in the liner because of time-honored ship etiquette.

The origin of this practice is lost in antiquity, but you will find the rule observed in every ship, whether the cabin of honor is an elaborate self-contained flat in a luxury liner or a single berth room in a small tramp.

The captain of the ship always has his own quarters on the starboard side—except, of course, where the design of the deckhouse brings them nearly amidships, when, even then, the cabin is on the starboard side—and the special passenger must be made comfortable on the "Old Man's" side. Likewise, he sits on the cabin's right-hand side.

These little points of ship etiquette are as rigid as the showing of a green light on the starboard side at night.

Requires Great Skill

Process Of Obtaining From Rare

Earth's Substitute For Radium

In a garden just outside London, England, the curious fact, says a writer, for extracting mesothorium, the substance that has almost entirely replaced radium for making luminous figures or watch dials and clock faces.

Mesothorium is far cheaper than radium, and is twice as powerful in making the phosphorescent paints that are used on the dial gages. Its drawback is that it has a shorter life than radium, its power of emitting alpha rays dying out in a few years.

The mesothorium is obtained from rare earths used in the manufacture of incandescent gas mantles. It is a chemical process requiring great skill, care, and patience in gradually concentrating the radio-active element from the raw material.

Patient Had Succumbed

A well-known physician was examining a class of nurses. He described the condition of a patient, and asked how much morphine, in his opinion, should be administered to the sufferer. "Eight grains," promptly replied the nurse.

The doctor made no comment and the girl passed on. When her turn came again she appeared greatly confused, and said, "Doctor, I wish to correct the answer I made last time. I mean to say that one-fourth of a grain should be given to the patient."

"Too late," remarked the physician, without looking up from his question paper. "The man's dead."

"We have been married twenty years today, John."

"Yes, for twenty years we have fought."

"What?"

"Life's battles together, Martha."

Store manager—"You say brutes

have a sweeter disposition than

Clerk: "Well, my wife's been both

and I can't say any difference."

Tulip Planting

Best Time To Set Out Bulbs in the Fall

Tulip planting time is approaching and the early bulbs are set out during the next few weeks another spring will pass without the gorgeous display of bloom for which the tulip is noted. According to the Superintendant of the Nappan, Nova Scotia, Experimental Farm, good bloom may be expected in the spring of 1926.

The beginning of November is the best time for 1926 Mr. Baird, the superintendent, states that the early varieties Veratillon Brilliant, Post-Boxer, Scarlet, Chrysler, Jost Van Von del, made a splendid showing from May 26th to June 12th. The Darwin tulips, Mr. Baird points out, come in bloom later, but are richer and have more delicate colors than the early sorts, filling in nicely between the early tulips and the summer annuals.

The first bloom of the Darwin tulips at Nappan in the year under review was June 5th. The flowering season lasted until the 24th of the month. Among the most prominent sorts grown that year were Europe, Edmore, Paracomb Sanders, Hargrave, La Tulipe Noire and Prof. Haulen.

This report, which was prepared by the Publications Branch of the Department of Agriculture at Ottawa, contains valuable information on dahlias, sweet peas, perennials and other border beauties field crops, and garden crops and other questions related to general farming.

Novel Way To Win Home

Couple In Germany Took Up

Residence On City Hall Steps

Rejected from their apartment by a German court order without an order being submitted to them by the housing committee, a young married couple named Bergmann moved their home to the steps of the Waldburg city hall and took up residence.

"Click marking defined the 'rooms' to which they declared their home. They had no furniture, but they had a table and chairs and a bed.

Unhappily, however, thronged to the point and obstructed traffic so much that the burgomaster used his influence with the housing committee to supply quarters for the couple immediately, even arranging for the transportation of their effects.

Now he is being swamped with threats from scores of others who are unable to get houses on account of the dire shortage. His only consolation is that the city hall steps won't hold all of them.

Visitor: "You poor man! Why don't you play some game to pass away the time?"

Prisoner No. 1457: "Lady, the only game I know how to play is chess, and I don't start a game at night, 'cause I'm to be hung Friday."

Tom Tar—"Why does that big can hold so much oil?"

Buccaneer Bill—"Obviously he's the food inspector."

The British trade in silk is five times greater than it was before the war.

Fattening Turkeys

Method Used For Conditioning Birds In About Three Weeks

The proper time to begin fattening turkeys is four weeks before they are wanted for table use. They need not be confined in pens, because when properly fed they take no more exercise than is necessary. Turkeys raised in the open during the summer cannot stand close confinement during the fattening period. In a bulletin on turkeys, available at the Publications Branch of the Department of Agriculture at Ottawa, complete instructions for feeding the fattening birds are given.

The young birds should be started feeling gradually. The feed should consist of mash and whole grain. The mash, which is fed for the morning and mid-day meals, is made up of equal parts of ground oats, barley meal, cornmeal and wheat. The whole grain should be used instead of the ground. The ground grains should be mixed thoroughly before moulting, with water or skim milk, using only enough to make the meal sticky together and not enough to make it sticky or sloppy.

The moulting should be done about two hours before feeding. The mash is fed in a clean trough which is kept as much as the turkeys will readily eat. The evening meal is a mixture of whole grain, whole corn being the best, and no more should be fed than the birds can consume. Fresh water and grit should be provided in abundance. The turkeys can be conditioned in this way in about three weeks, another week being used for killing, shipping and retailing.

Claimant Is Found After Sixteen Years

His Object, To Recover \$100,000

English Bricklayer Can Wear Size 18 Boots Although Somewhat

The man with the largest feet in Great Britain has been discovered. During carnival week in Spenny more (Yorkshire), a foot firm exhibited in their windows a pair of boots, size 18, weighing 7 pounds, 6 ounces, and stated that they would be presented to any one whom they would fit.

These boots have been exhibited up and down the country for 16 years without finding a claimant, but at Spenny more a claimant was forthcoming in Thomas Roger a bricklayer, aged 25.

Roger, whose height is 5 feet, 8 inches, on trying on the boots declared they were too tight for him.

A Murder Story

He had choked her, he had killed her. There could be no doubt about it; she was still and cold—cold as the ice in his fury. He was not convinced. He stepped on her—stepped on her again, with his big heavy foot. A faint gasp came from the groaning; No, she was still dead.

"Darn that engine," he muttered. "What—? Better explain why you haven't spoken to me for three days."

Hobby—I don't want to interrupt.

Roots For Seed

Field Root Set Is Grown from Little or Mature Roots or Seedlings, Planted in the Spring

Field root set is grown from little or mature roots or seedlings, planted in the spring. Seedlings are small immature roots and there are certain advantages in using them, but conditions being equal, they are not produced so much as mature roots.

Roots for seed raising must be handled with care, particular pains being taken to have no damage done in harvesting and storing. The proper methods of harvesting and storing are fully described in a new bulletin on Field Roots in Canada available at the Publications Branch of the Department of Agriculture at Ottawa.

In gathering the roots are to be used for seed raising the leaves should not be twisted off but cut two or three inches from the top of the root. The roots should not be trimmed, and a critical examination of them should be made at harvest time and all damaged, mottled, pruned and off-type roots discarded.

Many kinds of holding over winter roots to be used for seed have been tried, according to the bulletin, by far the best method used by Canadian conditions is to store them in properly constructed cellars or pits. For satisfactory storage the temperature should be maintained between 32 and 35 degrees Fahrenheit. Sudden and extreme temperature changes are the cause of greater loss than any other cause. Moulds, sugar beets and carrots will even stand considerable freezing provided they are not handled while frozen and that the frost is allowed to come out gradually. Stored roots must not be allowed to dry out as drying is one of the principal causes of loss in cellar storage.

Experiments Have

Proved Successful

Scientist Announces Extraction Of Rubber From Fig Trees

Dr. Max Frederic Ostus, a rubber specialist, announces that his first experiments in extraction of rubber from fig trees have proved successful.

Dr. Ostus said that rubber in considerable quantities may be obtained from the pearler, or French fig, and that the common California varieties, the Kadota and the Adriatic, are being subjected to research processes.

Now he had had produced a fine piece of rubber from parachea milk.

"The man who gives in when he is wrong," said the street orator, "is a wise man, but he who gives in when he is right is a fool."

"Marked," said a weak voice in the audience.

"Caney—"You ought to apologize to 'im."

Cassidy—"That's fair enough. O'H! I'm sorry to hear that. I'll accept my apology. I'll knock his block off."

Doctor—"I saw your husband yesterday. He was laboring under great mental stress."

Mrs. Dinks—"My mental stress is about right. It was laboring."

Cattle Raising Countries

British India Is the Largest Holder Of Cattle, and Canada Ranks Eleventh

Among the principal cattle-raising countries according to official returns for the latest year for which sufficient data is available for purpose of comparison, Canada ranked eleventh, British India as the largest holder with 14,572,304 head, and the United States second with 6,215,000 head.

The Union of Soviet Socialist Republics in Europe had 5,935,000; Argentina, 5,748,589; Germany, 17,022,256; France, 1,157,280; Australia, 12,365,128; Great Britain and Ireland, 13,022,256; the Union of Soviet Socialist Republics in Asia, 39,955,200; the Union of South Africa, 9,788,257; and Canada, 9,307,295 head.

A Poor Field

The square, more noted for his knowledge of horses, was a horse-shoer was not a frequent attendant at the village church, but his wife had prevailed upon him to go to a good example to the villagers for their betterment.

Awakening suddenly during their tedious service, the square yawned and blinked round the congregation. His eyes eventually perceived the hymn number board.

"Colours!" he murmured, in an audible whisper, and in a tone of great exasperation, "Only three numbers!"

Perhaps as possible, why say as any to make room on the highways for the new cars would be to suspend the use of the old cars.

Car owners found guilty of dangerous driving.

Eppes-The 121st Pacific New Brunswick, Lower-1st connection, no odd

without materially increasing the modern locomotives will be the King of the engine by the use of the George V. from the Great Western a nickel-plated boiler plate, the first of line in Great Britain. This locomotive is the pride of British workmen and the most powerful passenger locomotive that has ever been produced.

The fair of the iron horse has been produced first of its kind to be staged and to the water. With the train of the world, whether modern or old, modern passengers who will add a new chapter to the history of the world.

Remember the house you ship to:

American Hide & Fur Co.

Corner 6th Avenue and 4th St. East, Calgary, Alta.

LOTS OF LOW-PRICED TIRES — And OURS are GOODYEARS

SOME of our good friends went elsewhere for tires when rubber was high. They had to have low price and we couldn't give them both low price and Goodyear quality.

Today we can. We can give you a Goodyear Tire for no more than you were paying for 'gyp' tires. Ask us for prices.

Every cord and balloon in the list built with SUPER-TWIST Cords. Every tire with a tough, rugged tread. Come in and see them.

GREAT STORM IN BRITISH ISLES

London, Oct. 29. — A sixty-mile gale swept Ireland and part of England today. Several deaths and injuries resulted. Property, telegraph and telephone lines over a wide-spread area were damaged. A two-hundred foot chimney at Bradford Mill was blown down. A huge crane was blown over. The storm uprooted trees and unroofed houses.

An unfinished building in Southampton Row, London, crashed to the ground, smashing shop fronts. The wreckage was strewn across the street, thirty feet high in some places. Seas ran high along the southern and western coasts. Places were flooded and small craft wrecked.

Twenty persons were known to be dead and many seamen were missing at 3 p.m. today. Some of the deaths were among crews of small river ships which were torn from their moorings and sank in inland waters.

London, Oct. 31. The death toll in the great gale which has swept over the British Isles since Friday, today stood at more than 70. Most of the deaths were due to the destruction of fishing craft along the west coast of Ireland, where 50 persons were reported to have perished.

CANADIAN PACIFIC CROP REPORT

Winnipeg, Oct. 31. — Gratiating progress with threshing during the past week is reported by the Canadian Pacific Railway department of agriculture, and with another ten days of good weather, everything should be threshed. Warmer temperatures and occasional winds dried out grain nicely, and wheat is now being threshed grading better than that previously reported.

During the week and rain fell over most of Manitoba and there will be some delay to fall plowing on this account. Balance of the west reports good weather except Maple Creek district, where light snow fell yesterday. There is some shortage of labor, but the situation is not as serious as feared as all hands are now available for threshing, there being no further cutting or stacking to be done. Feed, with the exception of oats, is plentiful everywhere. Cattle shipments are lighter than last week, prices showing a slight advance.

Threshing is about completed in Manitoba; fall plowing too is well advanced with between 60 and 70 per cent of it done, the soil being in excellent shape for working. Cattle are in good condition with lots of feed available except, of course, oats, which are very short in this province.

At present 80 per cent of the grain is threshed in Saskatchewan, up to ten days ago, practically all grain threshed was showing damp and tough, but favorable weather has caused the grain to dry, and it is now running straight grade. 50 to 60 per cent of fall plowing is done.

In Alberta 60 to 70 per cent of the threshing is done. Crops all over the province are heavy, grades proving better than expected, but mostly two and three. Wheat crops of 40 to 50 bushels are reported. There is some shortage of labor, particularly in the south where it is claimed the beet sugar crop is somewhat delayed on that account. Only 15 per cent of fall plowing is done.

Conditions are good in British Columbia, with roots and potatoes dug, tobacco harvested and apple picking coming to an end.

"It made the best bread I ever tasted!"

Every Housewife Who Bakes Her Own Bread Is Delighted With SPILLERS "Bake-Rite" Flour

A Clareholm Housewife says:

"I am delighted to have a chance to tell you what I think of your flour."

"In 18 years of housekeeping I have never used flour that made up into such beautiful biscuits or cake. I shall never buy any other brand if you keep your flour up to this standard."
